BALTIC SEA
RENEWABLE ENERGY
AND HYDROGEN
EXPERTS ROUNDTABLE

COOPERATION IS KEY

The countries in the Baltic Sea region face challenges how to produce green and climate-neutral energy. In fact, as much as 75% of the EU greenhouse gas emissions still come from energy use and production. Cooperation and sharing good practices from hydrogen and other renewable energy sectors in projects such as BASREHRT, can be a game-changer in accelerating the green energy transition in the region.

We will meet in in two sets of round tables and one final event, which will be held simultaneously in Estonia, Latvia and Sweden.

February 9, 2022
14-18
(13-17 CET)

April 28, 2022

(13-17 CET)

August 30, 2022 | 13-17 (12-16 CET)

“What can we do together?”

“How can we all, including the society, benefit from collaborating?”

The seed - project BASREHRT - Baltic Sea Renewable Energy and Hydrogen Experts Roundtable overall aim is to create a multinational and cross sectoral platform for collaboration, consisting of renewable energy & H2 tech. Actors for building a future emission free energy system solution.

We must find new ways of working together, building new business concepts/models, all with the purpose of a building a decarbonized energy system solution.

MATS W LUNDBERG

Head of sustainability at Sandvik

MARTINA WETTIN

Market and PR Director/Founder
Partner Nilsson Energy

Do not miss the opportunity to be **part** of the Baltic Sea Region
H2 tech community **#BH2Network**.

YOU

are cordially invited to contribute with your unique expertise. As a representative of your company or organization and in interaction with other participants, you can create the team that can go from words to action.

In the events, you will have plenty of networking and mingling opportunities. The outcome will be compiled and analyzed in a transnational conclusion, which will be presented in a transnational webinar/dissemination event.
